The image is a timeline of video game consoles from 1970 to 1979, displayed in a grid format. Each year has a red header. The 1972 row contains a small image of the Magnavox Odyssey console. The 1975 row contains a pink arrow pointing right. The 1976 row contains a large central image of a Pong game on a television screen. The 1979 row contains a small image of the Atari 800XL home computer.

NON-PROG

School Yard Craze

It has been a busy term for all involved—there has been hardly a minute when the machines have not been in use. All computer activities outside normal lessons come under the general aegis of the club. Whilst it is not possible to please all of the people all of the time, N.R.F. has tried to organise things to suit most demands:

Beginners meet on Wednesday lunchtime and after School.
Accomplished programmers (Years 1-5) meet on Monday after School.
Senior programmers may book time during Private Study periods and
at other times.

All are welcome to join in activities and should ask if uncertain. It is surprising how quickly you can get started.

The new keyboard for the 3K ZX81 is now working well and a similar one has been purchased for the 16K ZX81. The 380Z will have been serviced over Christmas. We have just acquired "Cos" and "Machine Language" manuals which are available on request.

We would like to express our thanks for the money made available to keep this club running and look forward to further expansion during the year.
A. Schofield, M. N. Rutter, N.R.F.

CHEMISTRY COMPUTING COMPETITION

Although the number of entries was small, the quality of the programs submitted was high. The winner was A. McKecknie (6 J.B.) for a most original program to determine the nature of an unknown compound from the results of certain experiments asked for by the computer. It was closely related to the "O"-level practical syllabus and designed to run on the 380Z machine. A special prize was awarded to J. A. W. Reid (5 S.H.) for the program reproduced below, which runs on an unexpanded 1K ZX81 machine.

J.M.H.

Program to determine the empirical formula of a compound from its percentage composition, for a 1K ZX81, by J. A. W. Reid.

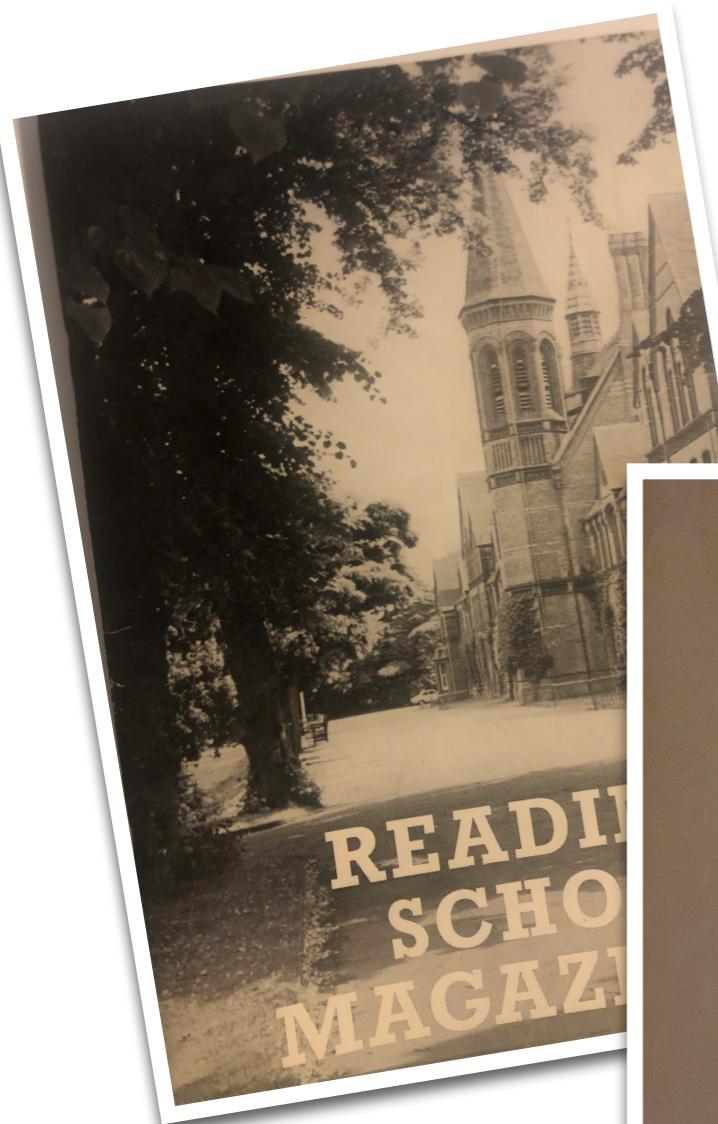

```

SPECTRUM CLUB

The summer term saw membership soaring to over thirty, although meetings were sporadic due to the combined intrusions of examinations and remission. A rota has been established and five people take it in turns to bring in their computers, allowing us to demonstrate programs and games on the lecture room television.

There is still room for increased numbers—all ZX Spectrum owners are invited to attend. We meet in the lecture room, after school on Fridays.

Thanks go to Mr. Toone and Mr. Bacon for their invaluable help.

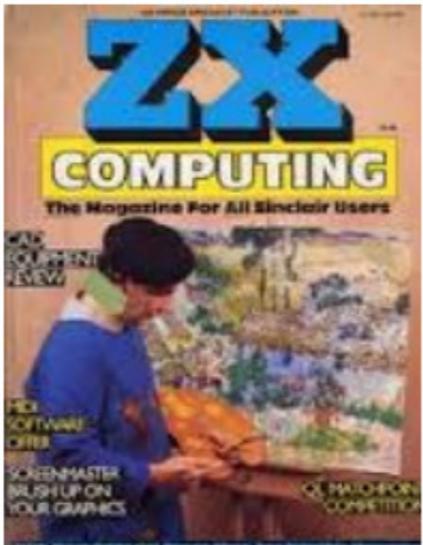

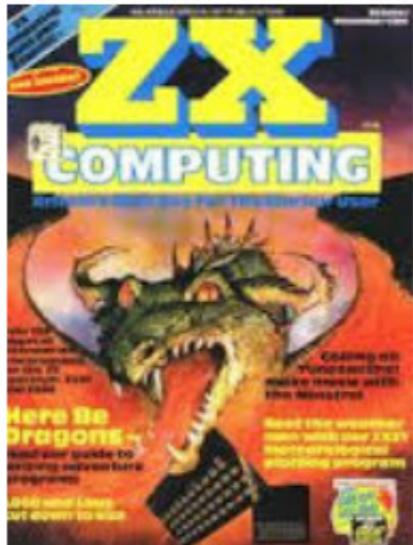

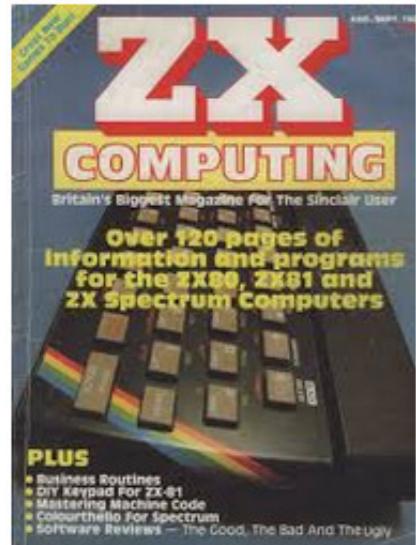

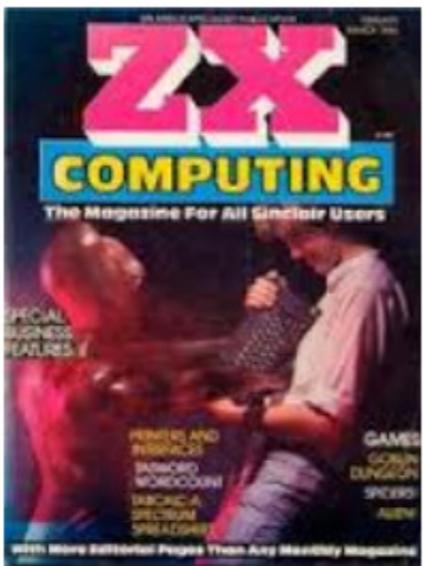

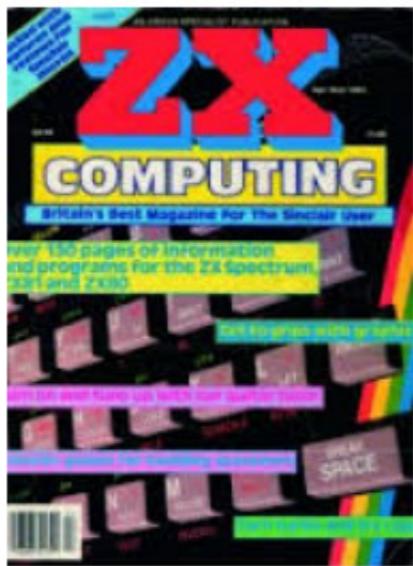

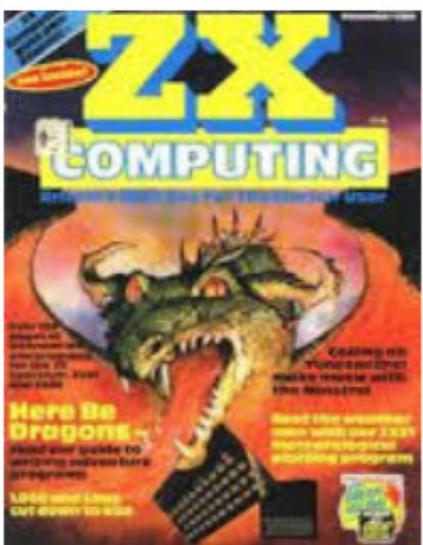

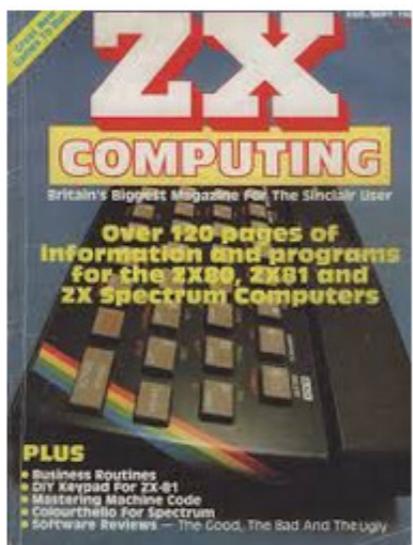

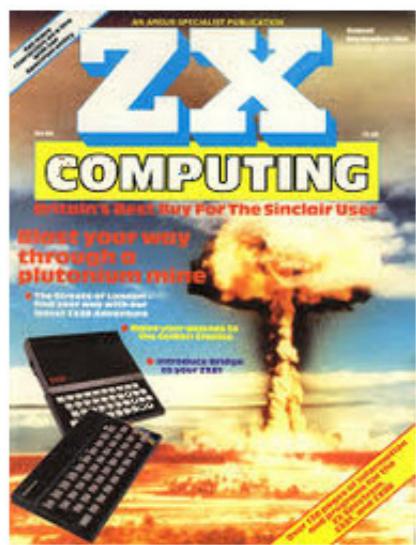

James Reid, Chris Gibbs

This figure is a grid-based timeline illustrating the evolution of home computing and gaming hardware from 1980 to 1989. The columns represent years from 1980 to 1989, and the rows represent specific hardware units. Each unit is accompanied by its name and a black circle containing its memory capacity. Some circles are highlighted with a green border.

KONIX HERE AT LAST

The long-awaited addition to the swelling consoles market has just about arrived. From October, the Konix Multisystem, which could possibly be the best home games machine yet, will be in stores across the nation priced at just over £200. Paul had a Glancey at the machine...

INCREDIBLE SPEC

On paper at least, the Konix wipes the floor with every other console, and some of its features even put the wind up powerful 16 bit home computers such as the Amiga and ST. Check out the specifications box below and you'll see that for the price, it's technical specification is outstanding.

State of the art custom circuitry put the Multisystem's graphics and sound capabilities beyond even the Amiga. Like the Amiga, the Konix has a Blitter chip which can shift large graphics around the screen at speed, but unlike the Amiga, the Konix hardware can mix sprites and vector graphics with equal ease making it even more flexible from the programmers' point of view.

The machine is equally well catered for sonically. The audio hardware provides high quality 25 channel stereo sonics on a par with Yamaha's DX-7 synth! Of course you can listen to the Konix through the TV, or, even better, you can plug headphones or a stereo amplifier straight into the jack socket on the back of the machine.

SHAKE, RATTLE AND ROLL

What puts the Konix Multisystem even further ahead of the field are its vast range of control options. A micro-switched Konix Navigator joystick comes with the package, but even more exciting is the innovative analogue steering controller which can adapt itself to suit three different game types.

For burnin' up the highway on a mo-

ing it the ability to shake in your hands should you drive over rough ground or nose-dive into a runway.

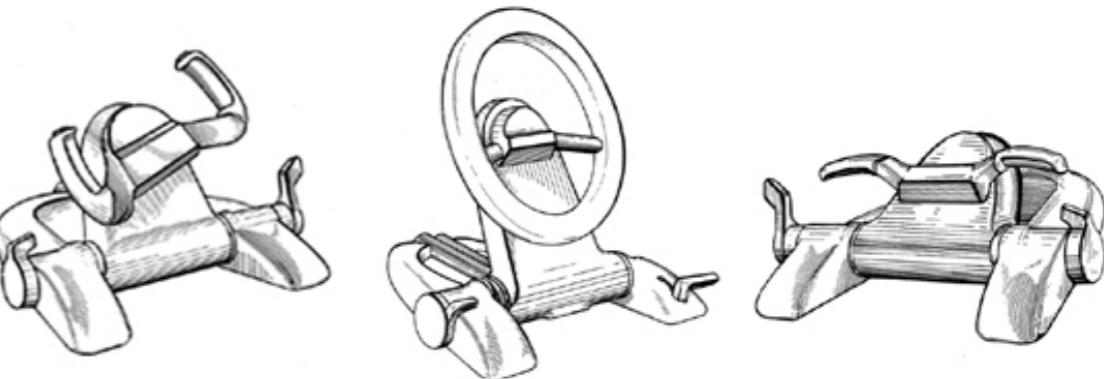

However you configure the controller, two independent fire buttons always fall easily under the thumbs and on the right of the console, there's an analogue lever which can double up as a throttle or a gear shift, or indeed anything else Konix programmers can dream up.

NOT THE COMFY CHAIR

Other hardware add-ons on the horizon include a light gun with recoil action and rapid fire machine gun mode, which will sell for around £40, and the much heralded Space Harrier-style hydraulic chair. This luxury item will cost just over £200, but should be the most fun piece of hardware ever devised for a home system. There are even plans for a plug-in exercise bike for fitness-conscious gamers to ride into the sunset. Who says computer games are bad for your health?

▲ Hammerfest by Visual Images

launched at least 20 titles alongside the machine when it is released. Here we have pictures of Last Ninja II from System 3 and Star Ray from Logotron - two conversions, both of which easily match their home computer counterparts in quality.

At the moment there's no news of any arcade conversions for the machine - strange really, considering its specifications it sounds an ideal machine to convert coin-ops to.

Konix software will come on pirate-proof 3.5" 880K disks which just slot

into the built-in drive, as well as cartridge, and will cost between £15 and £20. If the Multisystem gets the soft-

KONIX
MULTI-SYSTEM
EXPERIENCE THE REALITY

The long-awaited Konix Multi-System is finally here! This powerful computer system is designed to be compatible with a wide range of peripherals, including monitors, keyboards, and joysticks. With its advanced architecture, it can handle multiple tasks simultaneously, making it perfect for both work and play. One of the most impressive features of the Konix Multi-System is its compatibility with popular games like Space Invaders and Asteroids. The system's Amiga chip allows for smooth, high-quality graphics and sound, making it a great choice for gamers. Another highlight of the Konix Multi-System is its mix sprite feature, which allows users to combine multiple sprites on the screen at once. This makes it ideal for creating complex, multi-layered games. Overall, the Konix Multi-System is a remarkable piece of technology that offers unprecedented performance and compatibility. Whether you're a serious gamer or just looking for a powerful computer system, the Konix Multi-System is definitely worth considering.

Of course you can listen to the Konix through the TV, or, even better, you can plug headphones or a stereo amplifier straight into the jack socket on the back of the machine.

SHAKE, RATTLE AND ROLL

What puts the Konix Multisystem even further ahead of the field are its vast range of control options. A micro-switched Konix Navigator joystick comes with the package, but even more exciting is the innovative analogue steering controller which can adapt itself to suit three different game types.

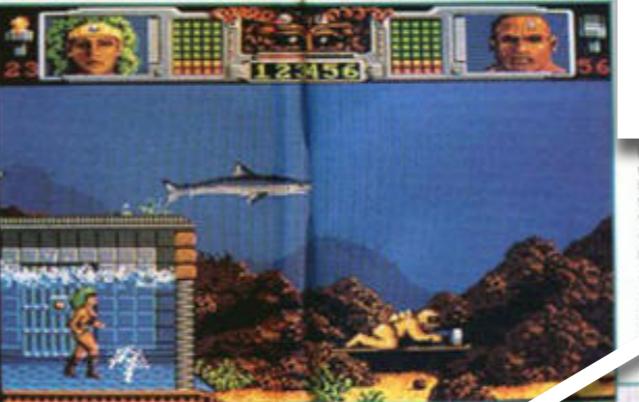

For burnin' up the highway on a mo-

ing it the ability to shake in your hands should you drive over rough ground or nose-dive into a runway.

However you configure the controller, two independent fire buttons always fall easily under your thumbs and on the right of the console, there's an analogue lever which can double up as a throttle or a gear shift, or indeed anything else Konix programmers can dream up.

NOT THE COMFY CHAIR

Other hardware add-ons on the horizon include a light gun with recoil action and rapid fire machine gun mode, which will sell for around £40, and the much heralded Space Harrier-style hydraulic chair. This luxury item will cost just over £200, but should be the most fun piece of hardware ever devised for a home system. There are even plans for a plug-in exercise bike for fitness-conscious gamers to ride into the sun-set. Who says computer games are bad for your health?

launch at least 20 titles alongside the machine when it is released. Here we have pictures of Last Ninja II from System 3 and Star Ray from Logotron - two conversions, both of which match their home computer counterparts in quality.

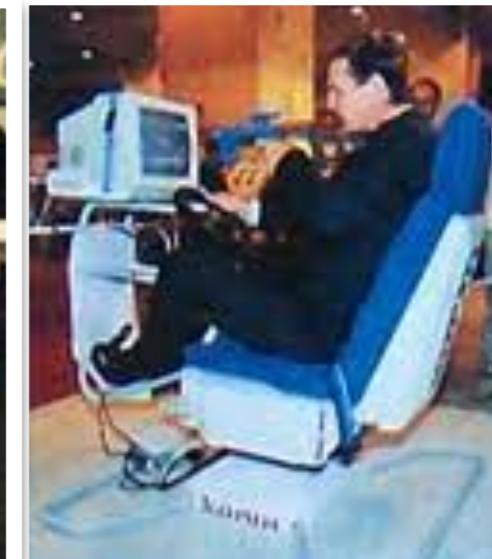

At the moment there's no news of any arcade conversions for the machine, but if you're really considering its specification then it sounds an ideal machine to convert coin-ops to.

Konix software will come on pirate-proof 3.5" 880K disks which just slot

A grid of 19 columns representing the year from 1990 to 1999. Each column contains images of video game consoles and titles. The first column for each year shows the console, while the second column shows a game title. A red box highlights the bee logo from the 1997 column.
